According to our (Global Info Research) latest study, the global Portable Centrifuge market size was valued at US\$ 209 million in 2024 and is forecast to a readjusted size of USD 281 million by 2031 with a CAGR of 4.3% during review period.

A portable centrifuge is a special type of centrifuge, which is characterized by its small size, light weight, and easy portability and operation. A portable centrifuge usually consists of a handheld device, a centrifuge cup (or centrifuge tube), and a power source (such as a battery). It uses the centrifugal force generated by the rotation of an object to separate, concentrate, or purify a sample. Due to its small size and portability, portable centrifuges are widely used in various occasions and environments, especially in situations where rapid centrifugation is required.
