Abstracts

The chlorophyll detector is based on the absorption of the chloroplast pigment extract to the visible spectrum, and uses a spectrophotometer to measure its absorbance at a specific wavelength, and the formula can be used to calculate the content of each pigment in the extract. According to the Lambert-Beer law, the absorbance A of a colored solution is proportional to the solute concentration C and the liquid layer thickness L , that is, $A = \epsilon CL$ where: ϵ proportionality constant.
