## Abstracts

The global Portable Dewatering Submersible Pump market size is expected to reach \$ 3089.6 million by 2029, rising at a market growth of 4.9% CAGR during the forecast period (2023-2029).

A dewatering pump is a centrifugal pump that is used wherever you need to remove water. You can use the pump at construction sites, in tunnels and mines and also in buildings where you need to remove unwanted water. The type of dewatering pump used depends on what media you are going to pump. If you need to remove water with abrasives, then you use a drainage pump with a strainer that prevents bigger stones to enter the pump. If you want to remove water with solids, then the dewatering sludge pump is the best choice.
