A portable dust and gas sampler is an air sampling device used to collect dust and gas samples from the air. Its design is easy to carry and use, suitable for on-site sampling and rapid response applications. Portable dust and gas samplers suck in air through filters, which collect particulate matter and other air pollutants. Then, the collected samples can be analyzed in the laboratory to determine the concentration of dust and gases. Portable dust and gas samplers can be equipped with different types of filters to collect specific types of particulate matter, such as PM2.5 or PM10. It can also be equipped with sensors to detect specific gases, such as carbon monoxide or nitrogen dioxide. Portable dust and gas samplers are commonly used in industrial hygiene, occupational health and safety, and environmental monitoring applications. It can also be used in emergency response situations to quickly assess the air quality of a given area.
