A heater is a device that converts electrical energy or other chemical energy into thermal energy, which is used for heating. It works by transferring heat through radiation or convective contact, creating a suitable temperature environment for the user. In most cases, heaters also reduce air humidity. Portable heaters, in particular, can be easily moved by users as they come with pulleys or bottom supports. They are commonly used in residential buildings, offices, hotels, shopping malls, hospitals, schools, train carriages, and other mobile heating purposes. They are also used in simple activity rooms and other civil and public buildings.

This report studies the global Portable Heaters production, demand, key manufacturers, and key regions.
