The global Portable Household Dehumidifier market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dehumidifiers can generally be divided into civil dehumidifiers and industrial dehumidifiers, belonging to a member of the air-conditioned family. Generally, the conventional dehumidifier consists of compressor, heat exchanger, fan, water container, shell and controller. Its working principle is that the wet air is pumped into the machine by the fan, through the heat exchanger, the water molecules in the air are condensed into water droplets, and the treated dry air is discharged from the machine, so as to keep the indoor humidity at the appropriate relative humidity. This report studies portable household dehumidifier.
