According to our (Global Info Research) latest study, the global Portable Indoor Formaldehyde Detectors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The portable formaldehyde detector is a brand-new indoor formaldehyde concentration monitoring instrument. It breaks the technical bottleneck of traditional formaldehyde detectors, which are complicated to use, high in cost, bulky and can only be detected once. It adopts the latest imported electrochemical sensors and high-precision calculations. The amplifying chip converts the formaldehyde concentration signal in the air directly into an electrical signal in real time and continuously, and after data processing by a microcomputer, the measurement result is displayed digitally on LCD.
