According to our (Global Info Research) latest study, the global Portable Intensive Care Ventilator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A portable intensive care ventilator is a medical device that provides mechanical ventilation to patients who require assistance in breathing. It is designed to be portable, compact, and lightweight, allowing for easy transportation and use in various healthcare settings, including hospitals, ambulances, and field hospitals. This type of ventilator is specifically designed for critical care patients who require advanced respiratory support. It delivers a controlled amount of oxygen and air to the patient's lungs, helping them to breathe properly and maintain adequate oxygenation. It also allows healthcare professionals to adjust various ventilation parameters, such as respiratory rate, tidal volume, and positive end-expiratory pressure (PEEP), to meet the individual needs of the patient. Portable intensive care ventilators are equipped with advanced features and technologies, such as different ventilation modes (e.g., assist-control, pressure support), alarms for monitoring patient safety, built-in battery for uninterrupted use during transport, and integrated patient monitoring capabilities (e.g., oxygen saturation, lung compliance). These ventilators play a crucial role in managing patients with respiratory failure or those undergoing surgery, providing life-saving respiratory support in emergency situations or during transportation between healthcare facilities. Their portability and versatility make them essential tools for critical care teams in delivering optimal patient care in various healthcare settings.
