A portable leakage protection tester is a portable device used to detect residual current (leakage current) in electrical equipment or circuits. It can determine the safety of the electrical system by measuring the leakage current value. It can effectively detect the working status of the leakage protector and ensure that it can cut off the power supply normally in the event of leakage or failure, thereby preventing safety hazards such as electric shock and fire. The portable design makes it suitable for scenarios such as power system maintenance and equipment repair, and is convenient for rapid testing and diagnosis.

Portable leakage protection testers play a vital role in electrical safety maintenance, especially in modern complex power systems. They can quickly and accurately detect the performance of leakage protection devices and are effective tools for ensuring personnel safety and preventing electrical fires. Their portability enables engineers and technicians to test equipment anytime and anywhere, greatly improving the efficiency and reliability of power system maintenance. With the increasing complexity of electrical equipment, the application of portable leakage protection testers will become an important guarantee for ensuring the safety of electrical systems.
