The portable nugget ice maker is a mobile and lightweight ice-making device designed for instant ice production in small spaces or non-fixed locations. Based on the principle of refrigeration cycles, it operates through the coordinated action of core components such as a compressor, condenser, and evaporator. The refrigerant is compressed and condensed to release heat, then depressurized via a throttle device to enter the evaporator, where it absorbs heat to cool and crystallize the liquid water in the water tank, forming irregularly shaped, crunchy nugget-like ice. Its compact structure incorporates an efficient insulation layer to reduce energy loss and is equipped with portable handles or rollers for easy deployment in various scenarios, such as outdoor picnics, in-vehicle use, and temporary events. Additionally, the device typically integrates an automated control system for functions like ice-making initiation, shutdown, and ice-full alerts, meeting users' dual needs for convenience and practicality. It provides a flexible and efficient solution for non-traditional ice-making environments.
