The global Portable Outdoor Gas Grill market size is expected to reach \$ 587 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of portable outdoor gas grills is estimated at approximately 2,100,000 units, with an average selling price of around USD 170 per unit. A portable outdoor gas grill is a cooking device powered primarily by liquefied petroleum gas (LPG) or butane, designed for portability and outdoor usage scenarios. It uses burner systems to provide stable and adjustable heat for grilling food in camping, picnics, outdoor gatherings, and mobile cooking environments. These products offer easy ignition, stable temperature control, rapid heating, and relatively simple maintenance, providing clear advantages in convenience compared to charcoal-based alternatives. The structure typically includes burner systems, gas control components, cooking grates, and foldable or integrated housing structures, with variations in power, size, and portability across models.

From a market structure perspective, portable outdoor gas grills represent a sub-segment within gas BBQ grills and are also an important part of the portable grill category. Demand is mainly driven by the growth of camping activities, the popularity of outdoor lifestyles, and the trend toward convenience. Within the overall grill ecosystem, these products combine the convenience of gas-powered systems with the flexibility of portable devices, holding a moderate share of the market. Industry barriers are low, with competition focused on product design, portability optimization, combustion efficiency, and brand distribution capabilities. The market is generally fragmented, although differentiation in mid-to-high-end products is gradually increasing.
