According to our (Global Info Research) latest study, the global Portable Ovulation Microscope market size was valued at US\$ 121 million in 2025 and is forecast to a readjusted size of US\$ 181 million by 2032 with a CAGR of 6.0% during review period.

Portable ovulation microscope is a compact and handheld device used to assist women in predicting their ovulation period. It works based on the principle of observing changes in saliva due to hormonal fluctuations during the menstrual cycle. As estrogen levels rise before ovulation, the saliva forms a distinct fern - like crystalline pattern when dried on the microscope slide. By examining these patterns through the portable ovulation microscope, women can gain insights into their fertility window and plan for conception or take contraceptive measures accordingly. This device is convenient for home use, allowing women to monitor their ovulation status regularly in a private and timely manner.
