Abstracts

According to our (Global Info Research) latest study, the global Portable POS Terminal market size was valued at US\$ 3971 million in 2025 and is forecast to a readjusted size of US\$ 7338 million by 2032 with a CAGR of 9.1% during review period.

A portable POS (Point of Sale) terminal is a compact, wireless payment device that allows merchants to accept and process transactions anywhere, rather than being fixed to a checkout counter. Unlike traditional countertop POS systems, portable POS terminals integrate payment acceptance (card, contactless, mobile wallet), transaction processing, and often receipt generation into a single handheld unit, using Wi-Fi, cellular (4G/5G), or Bluetooth connectivity to communicate with payment networks and backend systems.

The market demand for portable POS terminals is primarily driven by multiple factors, including the widespread adoption of mobile payments, the accelerated digital transformation of small and micro-sized merchants, the rise of omnichannel retail and instant services, and the advancement of device intelligence through 5G/IoT technologies. In scenarios such as street vendors, mobile supermarkets, express delivery collection points, and temporary sales at exhibitions, traditional fixed cash registers struggle to meet demands for flexible payment processing, real-time inventory synchronization, and electronic invoice issuance. Portable POS terminals, integrating features like QR code payment, IC card reading, 4G/Wi-Fi connectivity, thermal printing, and cloud-based backend management, significantly improve the operational efficiency and customer experience for small and micro-sized businesses due to their lightweight portability, immediate usability, and low barrier to entry. Furthermore, government support for non-cash payment infrastructure, the improvement of the payment license

ecosystem, and the integration of SaaS-based value-added services have further accelerated the continued expansion of the portable POS terminal market.
