Abstracts

The global Portable Power Bank Cell market size is expected to reach \$ 6460 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

A Portable Power Bank Cell refers to a single lithium-ion battery cell used in portable power banks. It typically exists in pouch, cylindrical, or prismatic form, providing external rechargeable power to mobile devices such as smartphones, tablets, and headphones. These cells feature high energy density, long cycle life, and high safety, making them a core component of mobile energy storage products. Global Portable Power Bank Cell production is projected to reach approximately 1.326 billion units in 2025, with an average price of approximately US\$3.258 per unit and a gross profit margin of approximately 18%-32%.

The portable power bank cell market has shown a steady and continuous growth trend in recent years, primarily driven by the diversified needs of mobile devices and users' demands for portable, high-performance power supplies. Product design is trending towards lightweighting, high energy density, and multi-functionality. The combination of pouch and cylindrical cells is becoming increasingly common to meet the balance between different capacities and portability requirements. New technologies are continuously penetrating the market, including the advantages of solid-state and semi-solid-state cells in safety and energy density, and the application of intelligent battery management systems (BMS) in charge/discharge control and thermal management. With the continuous improvement of industry standards and regulatory systems, the implementation of China's new national standards has strengthened the requirements for power bank battery cells in terms of safety, short-circuit protection, capacity labeling, cycle life, and consistency, prompting manufacturers to upgrade and optimize material selection, cell structure, and production processes. Overall, the market is evolving

towards higher safety, higher performance, more multifunctionality, and standardization, with product technology innovation and standardized regulation working in parallel, forming a dual driving force for the long-term healthy development of the industry.
