## Abstracts

According to our (Global Info Research) latest study, the global Portable Projectors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A portable projector is a projector which has been designed to be moved around as needed, rather than installed in a fixed position. There are several different types of portable projectors, and these devices range considerably in cost, depending on the type and the age of the equipment. A portable projection system can be extremely useful for a school or office, allowing people to give presentations with the projector without needing to install a projector in every room.

One very crude form of portable projector is the overhead projector, a type of projection system which is often used in schools. Overhead projectors allow users to place a sheet of transparency paper with printed information onto an illuminated pane of glass, with the image being projected with a system of mirrors. These projectors are very useful for situations in which static information needs to be projected for everyone in a room to see.
