The portable radio frequency fractional carbon dioxide laser generator is a device that integrates portability, radio frequency technology and fractional carbon dioxide laser. Fractional carbon dioxide laser is an instrument that uses high-energy carbon dioxide laser for minimally invasive skin treatment. The fractional is not a laser, but refers to a working mode of the laser, that is, the diameter of the laser beam (light spot) is less than a certain value (such as 500 μ m), and the laser beam is regularly arranged in a dot matrix. The portable radio frequency fractional carbon dioxide laser generator uses radio frequency technology to optimize laser performance and performs minimally invasive treatment of the skin through fractional carbon dioxide laser to achieve the purpose of improving skin quality. The device has the advantages of flexible use, significant effect, safety and reliability, and has broad application prospects in the fields of beauty and medical treatment.
