## Abstracts

According to our (Global Info Research) latest study, the global Portable Radiometers market size was valued at US\$ 289 million in 2025 and is forecast to a readjusted size of US\$ 515 million by 2032 with a CAGR of 8.6% during review period.

In 2025, global Portable Radiometers production reached approximately 0.56 million units, with an average global market price of around US\$ 500 per unit. Annual production capacity is 0.8 million units. Gross Profit Margin: 36%. Portable Radiometers are compact, handheld or easily transportable instruments designed to measure electromagnetic radiation across specific wavelength ranges, such as ultraviolet (UV), visible light, infrared (IR), or broader solar radiation. The portable radiometers industry chain starts upstream with sensor and component suppliers, including photodiodes, thermopile detectors, optical filters, lenses, and semiconductor materials, along with electronic components such as microcontrollers and signal processors; midstream manufacturers integrate these components into calibrated portable radiometers through optical design, assembly, and software development, often incorporating data logging, wireless communication, and calibration services; downstream channels include distributors, scientific instrument suppliers, and direct sales to end-users such as environmental agencies, solar energy companies, industrial facilities, research laboratories, and healthcare institutions, where devices are used for on-site radiation measurement and monitoring. The portable radiometers market is evolving from standalone measurement devices toward integrated, data-driven sensing solutions, where connectivity, real-time analytics, and cloud integration are becoming as important as measurement accuracy.
