According to our (Global Info Research) latest study, the global Portable Satellite Antennas market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The satellite or dish antenna is a device mainly responsible for receiving or transmitting high-frequency electromagnetic waves from the Earth to satellites that orbit in free space, and adapting these frequencies so that they can be distributed over coaxial cable networks.

Commercial satellites work in frequency bands classified as microwave, L, C, Ku and Ka band. However, these frequencies are so high that it is impossible to distribute them over coaxial cable and they have to be transformed to lower frequencies.
