The global Portable Seawater Desalinator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Portable Seawater Desalinator is a device that removes salt and other minerals from seawater, making it safe and potable for human consumption. It works by using a filtration system that removes the salt and other impurities from the seawater, resulting in clean, fresh drinking water. Portable seawater desalinators are typically small and easy to transport, making them ideal for use in remote areas where clean drinking water is not readily available. They are commonly used by hikers, campers, and outdoor enthusiasts, as well as by sailors and fishermen who need access to clean water while at sea.
