A signal generator is a device that can provide electrical signals at various frequencies, waveforms, and output levels. Used as a signal source or excitation source for testing when measuring the amplitude characteristics, frequency characteristics, transmission characteristics, and other electrical parameters of various telecommunications systems or equipment, as well as measuring the characteristics and parameters of components.

Signal generators, also known as signal sources or oscillators, are widely used in production practices and scientific and technological fields. Various waveform curves are represented by trigonometric function equations. The circuit that can generate various waveforms, such as triangular wave, sawtooth wave wave, rectangular wave (including square wave) and sine wave, is called function generator.
