The socket tester is a device used for socket testing. Its inspection function is that when the test button is pressed, if the circuit is normal, the leakage switch of the control circuit should trip immediately. If the test button is pressed, the leakage switch does not work, there are two reasons: the first is that the neutral wire and the ground wire of the detected socket are wrongly connected to each other, in this case, the plug indicates that the connection is correct, but the leakage switch will not Work. The second is that the wiring in the tested socket is completely correct, but the leakage switch on the line fails and needs to be repaired or replaced.
