Portable soil heavy metal analyzer is a device used for on-site rapid analysis of heavy metals in soil. This is a handheld device that uses X-ray fluorescence (XRF) technology to determine the concentration of heavy metals in soil samples. The analyzer is designed to be portable, easy to use, and able to quickly provide accurate results. Environmental consultants, soil scientists, and government agencies typically use it to assess soil pollution and identify potential risks to human health and the environment. Portable soil heavy metal analyzers can detect some heavy metals including lead, arsenic, cadmium, chromium, and mercury. This device can also be used to analyze other materials, such as rocks, sediments, and sludge.
