According to our (Global Info Research) latest study, the global Portable Spectrometers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A spectrometer is a tool commonly used by astronomers. It splits the light collected by a telescope into its colors, which enables astronomers to see the details in the light from space. Astronomers get a lot of information about a space object by studying its light. Spectrometers allow the measurement of the temperature of an object in space, learning which direction it is traveling, finding out how fast it is going, figuring out its weight, and even finding out what it is made of. This report analyzed the portable spectrometers market.
