Abstracts

According to our (Global Info Research) latest study, the global Portable Stand-Up Propane Grill market size was valued at US\$ 199 million in 2025 and is forecast to a readjusted size of US\$ 288 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global sales volume of portable stand-up propane grills is estimated at approximately 920,000 units, with an average selling price of around USD 210 per unit. A portable stand-up propane grill is an outdoor cooking device powered by propane, combining portability with a stand-up structural design. It uses burner systems to provide stable and adjustable heat for grilling food in backyard, camping, and outdoor gathering scenarios. Compared to traditional portable grills, these products feature integrated or detachable stand structures, offering improved working height and user comfort while maintaining a certain level of portability. The structure typically includes burner systems, gas control components, cooking grates, and stand-up support structures, with variations in size, power, and foldability across models.

From a market structure perspective, portable stand-up propane grills represent a niche sub-segment within gas BBQ grills, combining characteristics of portable and backyard grilling equipment. Demand mainly comes from mid-range consumers seeking both portability and improved usability. Within the overall grill market, this segment remains relatively small but maintains stable demand, particularly in North American backyard consumption markets. Industry barriers are low, with competition focused on structural design, stability, combustion efficiency, and brand distribution capabilities. The market shows relatively concentrated competition in the mid-range segment.
