The global Portable Temperature Patch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The portable body temperature patch is a small wearable device that can continuously measure and monitor human body temperature. It is designed to attach to the skin, usually under the arm or on the forehead, and is powered by a small battery. The patch contains a temperature sensor, which can detect changes in body temperature and wirelessly transmit data to smart phones or other mobile devices. Some patches can also store temperature data for later analysis by medical professionals. In recent years, portable temperature stickers have become more and more popular, especially in healthcare environments, because they allow continuous monitoring of patients' temperature without invasive procedures or frequent interruptions. Athletes and fitness enthusiasts also use them to track their body temperature during sports and other sports activities.
