The global Portable Transcutaneous Jaundice Meters market size is expected to reach \$ 345.3 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

Neonatal jaundice is a yellowish discoloration of the skin, conjunctiva, and sclera due to elevated serum or plasma bilirubin during the neonatal period. A bilirubin analyzer is a device used to measure bilirubin levels and is often used in neonatal intensive units to screen new-borns for jaundice. The analyzers either detect bilirubin levels in blood or serum samples or record skin reflectance measurements, which eludedly vis Trauma, and time associated with blood draws. The transcutaneous jaundice meter provides a reliable, non-invasive method of screening for jaundice in infants. Portable transcutaneous jaundice meters offer a quick and easy method for dynamic and ongoing assessment to identify abnormal bilirubin levels.
