The global Portable Visual Inspection System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Portable Visual Inspection System is a type of equipment used for non-destructive testing of materials and structures. It typically consists of a portable camera unit, a display unit, and various accessories such as lighting and lenses.

The camera unit is designed to capture high-quality images and videos of the object being inspected, which can then be viewed on the display unit in real-time. This allows inspectors to detect any defects or anomalies in the material or structure, such as cracks, corrosion, or other types of damage.

Portable Visual Inspection Systems are commonly used in a variety of industries, including aerospace, automotive, and construction, to ensure the quality and safety of materials and structures.
