Abstracts

The global Portable X-ray Machine Security Equipment market size is expected to reach \$ 612.7 million by 2029, rising at a market growth of 2.5% CAGR during the forecast period (2023-2029).

Portable X-ray machine security equipment is an instrument for imaging objects, which is a non-contact security inspection principle for inspection in the form of images. Irradiate the object with X-rays of a certain energy, collect the X-rays scattered and returned from the surface of the object, and perform statistical analysis to obtain images of the surface of the object, as well as various contraband (such as guns, knives, explosives, etc.) that are carried and hidden under the object. substances, drugs, etc.), will be displayed on the image. Those substances with a higher atomic number than the surface object (such as metals, ceramics, etc.) will appear on the image as darker images, and those substances with a lower atomic number than the surface (such as explosives, drugs, etc.) will appear on the image as lighter The images show that this enables a non-contact inspection of what is carried inside the object.
