According to our (Global Info Research) latest study, the global POS Solutions market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Retail point of sale (POS) software provides an easy-to-use tool for employees and customers, helping to complete retail transactions in physical locations (stores, showrooms, etc.). By using POS software, retail employees can find information about products, create sales orders, accept payments, and deliver receipts in an expeditious manner. This helps employees perform more transactions in less time while customers benefit from shorter waiting times at checkout. POS software can also be used to provide information to customers on product availability, pricing, etc. Furthermore, retail managers can use this type of software to monitor retail transactions and analyze sales or inventory data such as volume, amount, or frequency. Some advanced POS solutions may also provide functionality to manage inventory or customer profiles.
