According to our (Global Info Research) latest study, the global Position Limit Switches market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A position limit switch is an electromechanical device used to detect the presence or absence of an object, or to determine whether the object has reached a specified position. When the object comes into contact with the actuator of the limit switch, it changes the state of the switch, triggering an electrical signal. This signal can then be used to control machinery, provide feedback to control systems, or ensure safety in automated processes.
