Abstracts

The global Positioning Equipment Rental market size is expected to reach \$ 812 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Positioning equipment rental is an operational leasing service that provides the right to use professional positioning and surveying equipment for engineering surveying, topographic mapping, construction layout, machine control, GIS data acquisition, deformation monitoring, mining, road, energy, and infrastructure projects. Positioning equipment rental includes GNSS/RTK receivers, GPS surveying systems, total stations, robotic total stations, scanning total stations, data loggers, 3D laser scanners, construction positioning systems, etc. The core value of this service lies in helping users obtain centimeter-level or engineering-grade positioning and surveying capabilities over the project cycle without having to purchase high-value equipment upfront. It also reduces project implementation risks through equipment configuration, calibration, delivery, technical support, training, repair and replacement, and lease-to-purchase conversion.

From a demand structure perspective, infrastructure construction, roads and bridges, energy projects, mines, data centers, industrial parks, and urban renewal remain the main sources of demand. As construction sites increasingly demand digital layout, BIM on-site implementation, machine control, unmanned construction, and project quality traceability, user demand for combined rentals of GNSS/RTK, robotic total stations, data acquisition devices, and machine control equipment is rising. Meanwhile, low-priced domestic RTK and consumer-grade positioning technologies will replace some low-end rental demand, but high-end instruments, complex working conditions, and short-cycle projects are still more suitable for rental models.

This report studies the global Positioning Equipment Rental demand, key companies, and key regions.
