A positioning system (a assembly or device (component) associated with the goal of determining the location of a space) generally refers to the global positioning system (Global Positioning System). To put it simply, this is a satellite system made up of 24 satellites covering the whole world. This system can ensure that at any time, at any point in the earth, 4 satellites can be observed at the same time, so that the satellite can collect the latitude and latitude of the observation point, so as to achieve navigation, positioning, timing and other functions. This technology can be used to guide aircraft, ships, vehicles and individuals to arrive safely and accurately along the selected routes on time
