## Abstracts

According to our (Global Info Research) latest study, the global Positive Displacement Cryogenic Pump market size was valued at USD 437.3 million in 2022 and is forecast to a readjusted size of USD 554.3 million by 2029 with a CAGR of 3.4% during review period.

A positive displacement cryogenic pump is a type of pump specifically designed to handle and transfer cryogenic fluids, which are extremely cold substances typically at temperatures below  $-150^{\circ}\text{C}$  ( $-238^{\circ}\text{F}$ ). These pumps are crucial for various industrial applications where the transfer and handling of cryogenic fluids are required.

Positive Displacement Cryogenic Pumps, also known as positive displacement low-temperature pumps, are essential industrial equipment widely used in the liquefied natural gas (LNG) industry, as well as for the handling of liquid nitrogen and other cryogenic fluids. In the market, these pumps are experiencing significant growth driven by increasing demand, particularly in the energy and chemical sectors. The market size is expanding, and sales are steadily increasing due to the rising global demand for clean energy and industrial gases. These pumps find specific uses in LNG production, storage, and distribution, as well as low-temperature applications in laboratories and medical equipment. In the future, with the expansion of renewable energy and the LNG market, Positive Displacement Cryogenic Pumps are expected to continue their development, providing more efficient and reliable solutions for cryogenic fluid transport.
