A positive displacement hydraulic vane pump is commonly used in hydraulic systems to move fluid through the system. It consists of a housing, a rotor, and vanes that slide in and out of slots in the rotor. As the rotor turns, the vanes maintain contact with the inner surface of the housing, creating chambers that increase and decrease in volume to move the fluid.

Hydraulic vane pumps are known for their high efficiency, smooth operation, and ability to handle a wide range of viscosities. They are frequently used in applications such as automotive power steering, industrial machinery, and mobile equipment.
