## Abstracts

According to our (Global Info Research) latest study, the global Positive Displacement Roller Pump market size was valued at USD 1391.1 million in 2023 and is forecast to a readjusted size of USD 2043.4 million by 2030 with a CAGR of 5.6% during review period.

Positive displacement roller pump is a type of positive displacement pump used for pumping a variety of fluids.

Hygiene is a top priority in many industries, including pharmaceuticals, food and beverages, cosmetics and chemicals. If the fluids used in these industries are contaminated, it can pose a health hazard and shorten the shelf life of the product. Therefore, to pump fluids in a hygienic and sterile environment, these industries use peristaltic pumps. The mechanical parts of the peristaltic pump do not come into contact with the fluid because the fluid only passes through the tubing. Apart from this, peristaltic pumps are widely used to transport fluids with precision and accuracy, which is a major requirement in the above-mentioned industries. These factors are driving the demand for peristaltic pumps. The rise in the elderly population and the number of diseases have led to a surge in demand for medicines. The demand for the peristaltic pump market is expected to increase due to the widespread use of peristaltic pumps in the pharmaceutical industry. In addition, the increase in disposable income has also promoted the growth of the food and beverage and cosmetics industries. This also plays an important role in positively influencing the peristaltic pump market size. Additionally, chemicals are used throughout industry for a variety of purposes. Such as dyes for textiles, surfactants for detergents, silicon for the electronics industry, and other chemicals. This is expected to have a positive impact on the chemical industry; hence,

increasing demand for peristaltic pump market share.
