## Abstracts

According to our (Global Info Research) latest study, the global Positive Torque Limiter market size was valued at US\$ 347 million in 2025 and is forecast to a readjusted size of US\$ 434 million by 2032 with a CAGR of 3.2% during review period.

A positive torque limiter is a mechanical or electromechanical safety device used in power transmission systems to restrict maximum forward torque output. When the transmitted torque exceeds a preset threshold, it automatically slips, disengages, or interrupts power transmission to prevent overload damage. It protects motors, gearboxes, and drive shafts while ensuring stable power output and avoiding structural damage caused by shock loads or stalling conditions.

Upstream includes alloy steel materials, friction discs or spring components, precision machining processes, and in some cases electronic sensing elements. Downstream applications cover industrial automation equipment, construction machinery, and drive system manufacturing. The overall industry gross margin generally ranges from 25% to 45%, with higher margins for high-precision adjustable and intelligent monitoring models.

In 2025, the global production of positive torque limiters is estimated at 802,000 units, with an average price of \$420 per unit.
