According to our (Global Info Research) latest study, the global Positron Emission Magnetic Resonance Imaging System (PET-MR) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Positron emission magnetic resonance imaging system (PET-MR) is the latest high-end molecular imaging equipment that combines positron emission tomography (PET) and magnetic resonance imaging (MR). It has the inspection functions of PET and MRI at the same time, and is not affected by respiratory movement, vascular pulsation, etc., and will not affect image quality. The inspection time is shorter than that required by PET and MRI alone, achieving the maximum complementarity of advantages, and has advantages over PET/CT in terms of soft tissue resolution and non-invasive inspection. The device has broad application prospects in the diagnosis and treatment of tumors, cardiovascular and nervous system diseases, especially for the early diagnosis and curative effect of brain tumors, upper abdominal tumors, pelvic tumors, pediatric tumors, cardiac function evaluation, bone and soft tissue diseases, etc. Evaluation and prognosis judgment will be more accurate.
