According to our (Global Info Research) latest study, the global Post-CMP Cleaning System market size was valued at US\$ 463 million in 2025 and is forecast to a readjusted size of US\$ 710 million by 2032 with a CAGR of 6.1% during review period.

In 2025, the global shipment volume of Post-CMP Cleaning System was approximately 692 units, with an average equipment price of around 650,000 US dollars per unit, and the average industry gross margin was about 45%. Post-CMP Cleaning Equipment is used as cleaning equipment after semiconductor chemical mechanical polishing. Through a combination of megasonic cleaning, brush scrubbing, chemical cleaning and drying processes, it effectively removes polishing slurry, particles, metal ions and organic residues on the wafer surface. It has the advantages of low defects, high cleanliness and strong compatibility, is suitable for 6–12 inch silicon wafers and compound semiconductor substrates, and is widely used in integrated circuit manufacturing, advanced packaging and power semiconductor fields, serving as a key process equipment to ensure chip yield.

As a key supporting equipment for semiconductor manufacturing, the market demand for Post-CMP Cleaning Equipment is closely bound to the development of the semiconductor industry, and its technical level is directly related to chip yield and performance. The industry development focuses on process optimization and performance upgrading, with the core trend of improving cleanliness, reducing wafer damage, and enhancing adaptability to different specifications of substrates and advanced processes. The industry competition shows a trend of concentration among leading enterprises, and technical barriers and industrial coordination capabilities have become the core competitiveness of enterprises. In the future, it will continue to expand

application scenarios and improve product systems with the upgrading of the downstream industry.
