A post forming machine is a specialized piece of equipment used in the manufacturing of post-formed laminates, which are commonly used in countertops, desks, cabinets, and other furniture. Post forming involves bending and laminating decorative surfaces, typically high-pressure laminate, around the edges of a substrate (usually particleboard or MDF) to create smooth, continuous, and seamless surfaces without visible joints. The machines typically consist of a heating element (such as hot air or infrared heaters), a press mechanism to apply pressure to the material, and a mold or profile system that defines the shape of the final product.
