Abstracts

According to our (Global Info Research) latest study, the global Post-operative Foam Dressing market size was valued at US\$ 540 million in 2025 and is forecast to a readjusted size of US\$ 785 million by 2032 with a CAGR of 5.5% during review period.

In 2025, global production of post-operative foam dressings reached approximately 70 million units, with total production capacity estimated at around 93.4 million units. The average unit price was about USD 7.5, and gross profit margins ranged from 55% to 75%, reflecting strong clinical adoption and value in surgical wound management. Production focuses on foam structure optimization, high absorbency, skin-friendly adhesives, and sterile packaging to support rapid healing and patient comfort.

Post-operative foam dressings are designed specifically for surgical wounds, providing cushioning, exudate management, and protection against infection. They support faster recovery and reduce the need for frequent dressing changes. These dressings are widely used across general surgery, orthopedic procedures, plastic surgery, and other post-surgical applications.

The industrial chain includes upstream polyurethane or silicone foams, absorbent layers, adhesives, and backing films. Midstream manufacturing involves foam formation, cutting, coating, lamination, sterilization, and packaging. Downstream demand comes from hospitals, surgical centers, wound care clinics, and home healthcare providers.
