## Abstracts

According to our (Global Info Research) latest study, the global Post Processing System for Pouch Lithium-ion Battery market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The post-processing of the lithium battery is to activate, test and judge the quality of the battery after the battery is completed.

Specifically, it includes the formation, capacity division, and sorting of the battery cells. After post-processing, the battery cells can reach a usable state. Depending on the production process, the number of charging and discharging of the battery cell is not exactly the same, but at least twice, the first time is formation, and the second time is capacity division. Formation and capacity separation detection have a very significant impact on the performance of lithium batteries. The temperature and current accuracy control capabilities of formation equipment also determine the final performance parameters of the battery. The control and detection accuracy, long-term stability, and reliability of capacity separation equipment Safety and safety have a significant impact on the quality, production pass rate, production efficiency and safe production of the battery manufacturing process.
