Post-tensioning products refer to a specialized set of materials and equipment used in the post-tensioning process, a method of reinforcing concrete to enhance its strength and durability. This technique involves tensioning high-strength steel tendons (cables or rods) inside concrete after it has been poured and cured. Post-tensioning products typically include the steel tendons, anchorage systems, plastic ducts for housing the tendons, wedges or clamps to secure the tendons at the ends, and various accessories for protecting and managing the tendons. These products are essential in applications such as bridges, parking structures, buildings, and other large concrete structures where high tensile strength is required to resist cracking and improve load-bearing capacity.
