Abstracts

According to our (Global Info Research) latest study, the global Potash Fertilizers market size was valued at USD 1744.9 million in 2023 and is forecast to a readjusted size of USD 2197.6 million by 2030 with a CAGR of 3.3% during review period.

Potassium is the third major plant and crop nutrient after nitrogen and phosphorus. Potash is important for agriculture because it improves water retention, yield, nutrient value, taste, color, texture and disease resistance of food crops. It has wide application to fruit and vegetables, rice, wheat and other grains, sugar, corn, soybeans, palm oil and cotton, all of which benefit from the nutrient's quality-enhancing properties.

Asia Pacific accounted for the largest market share in 2017; this can be attributed to the high population in the region leading to an increased demand for food grains and growth in awareness among farmers about the efficient use of land through fertilizers. Asia Pacific is projected to be the fastest-growing region from 2018 to 2023 due to increase in consumption of vegetable crops that require potash fertilizers for maintaining their potassium content, which also fuels the growth of the potassium fertilizers market in the region.
