Abstracts

Potassium is the third major plant and crop nutrient after nitrogen and phosphorus. Potash is important for agriculture because it improves water retention, yield, nutrient value, taste, color, texture and disease resistance of food crops. It has wide application to fruit and vegetables, rice, wheat and other grains, sugar, corn, soybeans, palm oil and cotton, all of which benefit from the nutrient's quality-enhancing properties.

Scope of the Report:

This report focuses on the Potash Fertilizers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia Pacific accounted for the largest market share in 2017; this can be attributed to the high population in the region leading to an increased demand for food grains and growth in awareness among farmers about the efficient use of land through fertilizers. Asia Pacific is projected to be the fastest-growing region from 2018 to 2023 due to increase in consumption of vegetable crops that require potash fertilizers for maintaining their potassium content, which also fuels the growth of the potassium fertilizers market in the region.

The worldwide market for Potash Fertilizers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
