According to our (Global Info Research) latest study, the global Potassium Bicarbonate Fertilizer market size was valued at US\$ 50.5 million in 2024 and is forecast to a readjusted size of USD 60.6 million by 2031 with a CAGR of 2.5% during review period.

Potassium bicarbonate fertilizer is a chemical fertilizer containing potassium and carbon and is weakly alkaline. Potassium is one of the macroelements necessary for plant growth. It can promote plant photosynthesis, improve photosynthetic efficiency, promote the synthesis and transportation of carbohydrates, make plant stems thicker, and enhance plant resistance to lodging, drought, cold and other stresses. The carbon dioxide produced by the decomposition of potassium bicarbonate can be used as a carbon source for plant photosynthesis, which helps to enhance plant photosynthesis and improve crop yield and quality. At the same time, carbonate ions can also play a certain buffering role in the soil, helping to regulate soil pH.
