Scope of the Report:

This report focuses on the Potassium Chloride in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Potassium is the third major plant and crop nutrient after nitrogen and phosphorus. Potash is the common name for various mined and manufactured salts that contain potassium. Potassium chloride (KCl) accounts for most of the K used in world agriculture (about 90%). Other widely used K products include potassium sulfate, potassium nitrate, and potassium-magnesium salts.

Potassium bearing minerals are mined from underground ore deposits, salt lakes and brines. Then, the ore must be beneficiated and purified using dry and slurry processes. Guichon Valves can supply custom-made valves suitable for such abrasive slurries. Another potassium fertilizer is potassium sulfate, which is frequently used for crops where additional chloride from more common KCl fertilizer is undesirable. Potassium sulfate can be extracted from the mineral langbeinite or it can be synthesized by treating potassium chloride with sulfuric acid at high temperature. By adding magnesium salts to

potassium sulfate, a granular potassium-magnesium compound fertilizer can also be produced.

The worldwide market for Potassium Chloride is expected to grow at a CAGR of roughly 0.8% over the next five years, will reach 13200 million US\$ in 2023, from 12600 million US\$ in 2017, according to a new GIR (Global Info Research) study.
