A Potato Steam Peeler is a machine used for the rapid peeling of potatoes in large quantities. It uses steam to soften the outer layer of the potatoes, making it easier to remove the skin. The machine is equipped with a rotating drum, which can peel a considerable amount of potatoes at once. Once the steam has softened the skin, the potatoes are agitated and tumbled around the drum, creating a rubbing action that peels the skin off efficiently. The potatoes are then washed and ready to be sliced, diced, or prepared in Others ways for further processing.
