Powder-based instant thickening agent can be explained in English as a substance that is in a powdered form and is specifically designed to quickly and effectively increase the viscosity or thickness of a liquid when added to it. This type of agent is often used in food and beverage preparations, as well as in various industrial applications, to achieve a desired consistency or texture. Upon contact with the liquid, the powder particles rapidly disperse and swell, creating a thicker mixture without the need for extensive mixing or heating. The convenience and efficiency of these powder-based thickeners make them a popular choice for both home and commercial use.
