Abstracts

According to our (Global Info Research) latest study, the global Powder-Coated Laminated Bus Bars market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Powder-Coated Laminated Bus Bars are electrical conductors made from multiple layers of metal foil or copper foil through a lamination process. Each layer of metal foil is separated by an insulating layer (usually resin or cardboard), creating a multi-layer structure. Powder coated busbars offer unique advantages over any other type of insulation. These materials are cost-effective compared to thin-film insulation materials and can be easily applied to any shape and size using electrostatic spraying or dip-coating processes. Epoxy powder coatings have very high dielectric strength, are not affected by most elements, and allow for closer placement of busbars in the system, making them ideal for single or multi-conductor assemblies with many forms.

Currently, the key models of Powder-Coated Laminated Bus Bars include Rogers' ROLINX®, etc.
