Abstracts

The global Powder Coating Services market size is expected to reach \$ 1975 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

To address the problems of high environmental pollution, low material utilization, and insufficient coating uniformity and durability associated with traditional liquid coating processes, powder coating services have emerged. Since the industrial application of powder coating technology in the mid-20th century, the surface treatment industry has witnessed revolutionary progress. Currently, powder coating services have evolved into professional solutions encompassing various technical routes such as electrostatic spraying, fluidized bed dip coating, and UV curing, integrating automated and intelligent pretreatment and curing systems. This service achieves near-zero VOC emissions, representing a modern coating method that combines excellent protective performance, superior economic benefits, and environmental friendliness.
